

Tyler® Hopper Feeder

Adjustable height, removable legs, and variable speed drive.

The Tyler® Model 3625 Hopper Feeder is a bottom feeding belt type hopper feeder that is designed for feeding short lengths of lumber from a vertical stack. It can feed stock from ½" to 6" in width and ¼" to 2" in thickness. The hopper is tapered for easy loading and is open ended to accommodate

longer stock. Originally designed for use with a molder, it can also be used with many other machine types.

The feeder is a self-contained machine, equipped with adjustable height and removable legs. A variable speed DC drive is used to provide the infinitely adjustable standard

speed feed of 20 to 70 ft/min. The stock is fed automatically through the bottom by an endless, high friction, rough top belt, which is powered by a ½ HP DC motor. The automatic feeding allows one operator to both feed and tail a machine in many applications.

What it is:

Bottom feeding belt type hopper feeder that feeds short lengths of lumber

What it does:

- Automatically feeds lengths of material from a vertical stack
- Applications include feeding molders, sanders, finishing equipment and similar applications
- Infinitely adjustable speed range
- Feeds stock of ½" to 6" wide and ¼" to 2" thick
- Allows one person to feed and tail a machine in many applications

General Specifications

XL Hopper Feeder	
Minimum Stock Width:	1/2"
Maximum Stock Width:	6"
Minimum Stock Length:	8"
Maximum Stock Thickness:	2"
Feed Speed Range:	20-70 ft/min.
Approximate Weight:	250 lbs.

Model 4011 Hopper is 12' and began as a custom model. Consult Warsaw Machinery with your special machine needs.
